## Add or Remove Programs

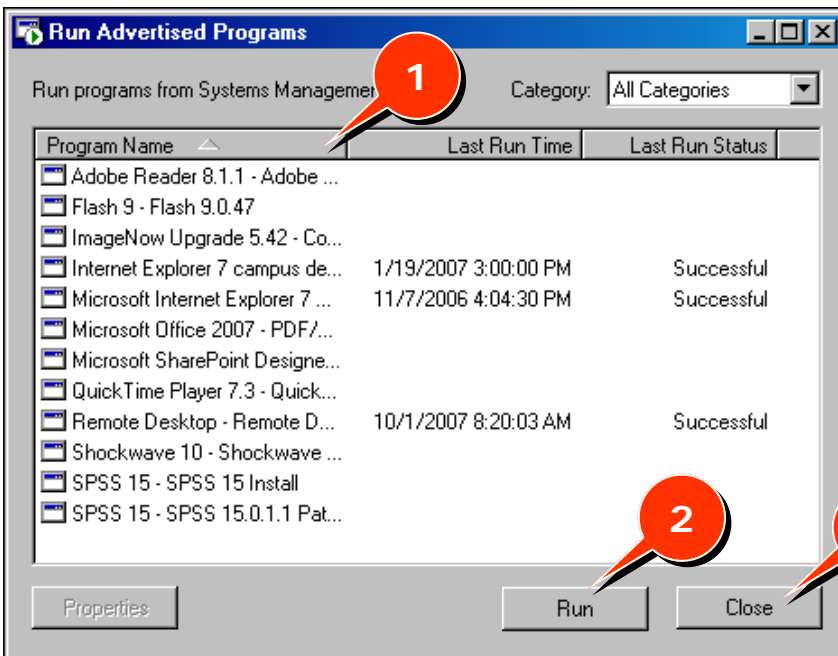

### Add or Update Programs From TowsonU

Towson University has made it easy for you to install software on your networked TU computer without you having to be logged in as Administrator! The Run Advertised Programs Tool enables you to add new programs or updates for software you already have installed. The available software may vary from user-to-user.

1. From the Windows Desktop, select **Start > Settings > Control Panel > Run Advertised Programs**.
2. The **Run Advertised Programs** dialog box displays. In the dialog box, you will see a list of available programs that you have been authorized to add or update from the TU network (Figure 1, 1). Note: if no programs are listed, please contact the Help Center at 410-704-5151.
3. Select the desired program to install or update and click the **Run** button (Figure 1, 2).
4. A Windows Installer window displays (it varies from program), please follow the prompts.
5. When the installation is complete, click the **Close** button (Figure 1, 3) to close the **Run Advertised Programs** dialog box.

Some software may require you to reboot — it's strongly recommended to save any work before adding or updating any software using this procedure.

#### Launch Run Advertised Programs from the Web:

1. Go to [www.towson.edu/sms](http://www.towson.edu/sms) and click the link **Run Advertised Programs**.
2. When prompted, click Run.
3. Proceed with step 3 from previous directions.

This procedure will only work on a computer connected to the network.
