A CLOSER LOOK

Graduate students in the applied information technology master’s degree program can update and enhance their skills in a full range of areas, including systems development, IT project management and business analysis. Students complete the requirements for one or more graduate certificates as they work toward completing their degrees. These post-baccalaureate certificate programs are applied programs that focus on the most relevant and timely topics in the field. The AIT curriculum is designed to train students in the most current information technology needs and practices. The program is intended for students who have a bachelor’s degree in information technology, computer science, computer information systems or a related field, who will enter the program for advanced studies. However, the program may also interest you if: you do not have a bachelor’s degree in information technology but currently work in the IT field and seek additional academic background for professional growth or if you have a bachelor’s degree in a discipline other than IT and want to prepare yourself for careers in this field.

OUTCOMES

• Build your IT expertise as you learn from nationally recognized faculty who bring both strong academic reputations and years of practical experience to the classroom.
• Take advantage of course content and schedules that are geared to working professionals.
• Experience courses offered during the fall, spring and summer semesters at Towson University in the evening. Part of the program is also offered online.
