Creating a Timed Test and using Test Exceptions

Note: If you are using a timed test in a course with a student who has test accommodations through DSS, requiring extra time, please take note of the options under “Timed Test with Test Exceptions”

Timed Test with Auto Submit On

When creating a timed test, you have the option for Blackboard to Auto-Submit the test after the time limit is reached. If you have a student(s) with test accommodations through DSS that require extra time and are using Auto-Submit, you will need to set up a Test Exception (see below) for that student(s).

1. Create the test in Blackboard, following the instructions in the Create Test and Create Test Question documents
2. Under Test Availability, use the options below:
   a. **Force Completion:** If you require students to complete the test in one sitting, turn Force Completion on by checking the box. If the students are allowed to start the test, save and leave, then return to the test later, leave Force Completion off by leaving the box unchecked. **Note:** If you have Force Completion turned off, the timer will continue to run even after the student has saved and left the test. If the timer runs out while the student is away from the test, Auto-Submit will submit the test and students will receive a message that they have run out of time.
   b. **Set Timer:** To set a timer, check the box next to “Set Timer”. This will require you to enter a time limit. The time limit in Blackboard is calculated in minutes (i.e. a test with a 2 hour time limit would be entered as 120 minutes). All students will see a timer bar at the top when they start the test. Notifications to Students will be given when they reach ___ minutes left.
   c. **Auto-Submit:** To turn on Auto-Submit, select the “On” option under the Auto-Submit header. When Auto-Submit is on, students will receive a pop-up notification once the time limit is reached, letting them know they've reached the time limit and it will be submitted.

Timed Test with Auto Submit Off

When creating a timed test, you have the option to turn on Auto-Submit, which will submit a test for a student automatically once the time limit has been reached. If you would like students to be able to continue after the time limit is reached, follow these steps

1. Create the test in Blackboard, following the instructions in the Create Test and Create Test Question documents
2. Under Test Availability, use the options below:
   a. **Force Completion:** If you require students to complete the test in one sitting, turn Force Completion on by checking the box. If the students are allowed to start the test, save and leave, then return to the test later, leave Force Completion off by leaving the box unchecked. **Note:** If you have Force Completion turned off, the timer will continue to run even after the student has saved and left the test. This can lead to students having timers that expand over multiple days.
   b. **Set Timer:** To set a timer, check the box next to “Set Timer”. This will require you to enter a time limit. The time limit in Blackboard is calculated in minutes (i.e. a test with a 2 hour time limit would be entered as 120 minutes). All students will see a timer bar at the top when they start the test. Notifications to students will be given when they reach ___ minutes left.
c. **Auto-Submit:** To turn off Auto-Submit, select the “Off” option under the Auto-Submit header. With Auto-Submit turned off, students will receive a notification that the time is up and asking if they would like to submit or cancel.

**Timed Test with Test Exceptions**

Test Exceptions allow you to create a timed test with Auto-Submit on for your class, but still allow students who have testing accommodations through DSS to receive their extra time. To set up a test with exceptions, follow the steps above for the Auto-Submit option you prefer, then follow the steps below.

1. Locate the **Test Availability Exceptions** header
2. Select **Add User or Group**
3. Check the box next to the name or names of students with exceptions and click **Submit**.
   
   **Note:** you can select multiple names on the Add User or Group page, but you will need to enter their exceptions separately

   ![Figure 1](image)

4. If a student has extra time, change the number of minutes under the **Timer** column.
   
   **Note:** Please make sure to enter the full time for the students with exception, not just their extra time. I.e. if the test is 60 minutes, and a student gets time and a half, do not enter 30 in the Timer option, enter 90.

5. If you want the test to auto-submit, or require the students to take the test in one sitting, you must check the **Auto-Submit** and **Force Completion** for each student under the Exception header.

**Test Presentation Options**

When creating a new test, you have the ability to choose how the test is presented to the students.

**All at Once:** Presents all questions to the students on page. This requires the students to scroll down to see the next question.

**One at a Time:** Presents the questions on individual pages. To get to the next question, the student must click >.

**Prohibit Backtracking:** If prohibit backtracking is on, the students will not be able to go back to a question they have answered or skipped. This option is only available to if the One at a Time presentation option is selected.

**Note:** if prohibit backtracking is selected and a student tries to use the back button on their browser, the page will refresh to the question they are currently on. I.e. a student is on question 12, and wants to change the answer to question 11. They try to use the back button on the browser, but the page refreshes and continues to show question 12. If Force Completion is on, and they use the back button on the browser, it will submit the test.

**Randomize Questions:** This will randomize the order in which the questions are shown to the student. This option is available both for the All at Once and One at a Time options.
**Screenshots to share with Students**

The following pages contain pictures of the various notifications students will receive while taking tests on Blackboard. Please feel free to share this page with your students to point out any notifications they should be aware of.
