

Mac: tu-openaccess Wireless Connection

Connecting to the tu-openaccess network

Introduction

The tu-openaccess network is just that – an open access network that does not require you to log-in using your TU NetID and password. Users should practice the same precautions as they would on an open network such as a coffee shop or airport. Towson does not recommend using open networks when dealing with sensitive information. NetID holders should choose the tu-secure wireless network when working with sensitive information like social security numbers, credit cards, bank accounts and confidential University data.

If you need additional assistance, please contact the Help Center at 410-704-5151.

Note: Please be aware that Towson University wireless devices will not connect to the open access network.

Connecting to the Network

1. In the upper right corner of your screen, click on the **Wireless Icon**.

Figure 1

2. A list of available networks will be shown. Click on the network named **tu-openaccess**.
3. Your machine is now connected to the **tu-openaccess** network.
