## tu-secure Wireless Connection Instructions

---

### Introduction

---

The tu-openaccess network is just that – an open access network that does not require you to log-in using your TU NetID and password. Users should practice the same precautions as they would on an open network such as a coffee shop or airport. Towson does not recommended using open networks when dealing with sensitive information. NetID holders must use the tu-secure wireless network when working with sensitive information like social security numbers, credit cards, bank accounts and confidential University data.

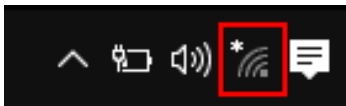

If you need additional assistance, please contact the Help Center at 410-704-5151.

**Note:** Please be aware that Towson University wireless devices will not connect to the open access network.

### Connecting to the Network

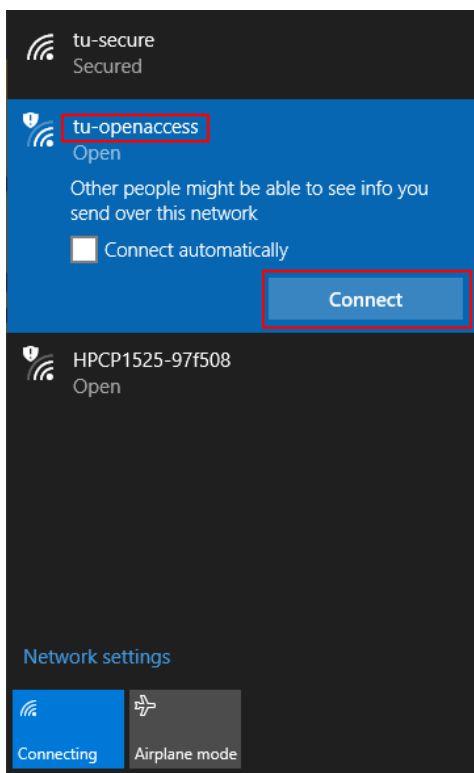

---

1. In the bottom right corner of your screen, click the **Wireless Icon**.

**Figure 1**

2. A list of available networks will be shown. Click on the network named **tu-openaccess**.
3. Click the **Connect** button.

**Figure 2**

4. Your machine is now connected to the **tu-openaccess** network.
