
Towson University's VPN

Virtual Private Network for Mac

Introduction

Towson University's VPN allows you connect to the campus network through any computer. It is mainly used for faculty, staff, and students who need to:

- Map to network drives when not on Towson University's network or while on tu-guest
- Use printers they have configured
- Connect directly to a personal (H:) and/or departmental (O:) file share when they are not using Virtual Workspace
- Use Microsoft Outlook to connect to an Exchange account using Exchange protocol when not using Outlook Web Access or Virtual Workspace

The VPN client is automatically installed on university Macs. You should not have to install it.

Note: Students can access files on their H drive via <http://tigerweb.towson.edu> without using the VPN.

Using VPN

1. Click on the **Applications** Folder.

Figure 1

2. Click the Cisco folder then select the **Cisco AnyConnect Secure Mobility Client.app**.

Note: If the Cisco folder is not present, follow the instructions below to install the VPN Client.

Figure 2

3. In the **AnyConnect** window, select **Connect**.

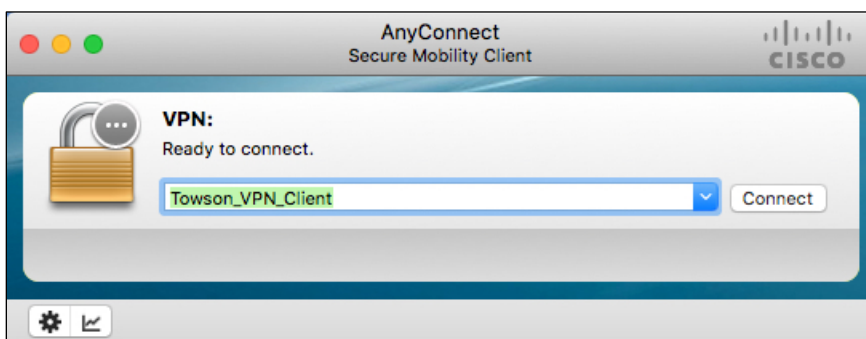

Figure 3
